

CS's DMA (Direct Market Access) service provides clients with the ability to electronically execute market or limit orders directly on the exchange. CS's DMA service is fast and provides complete anonymity. In the US and Europe where there are multiple execution venues and ECN's for most stocks CS's DMA service uses "Pathfinder". Pathfinder is proprietary smart routing logic designed to ensure orders are sent to the venue with the best price, liquidity and speed of execution. The Pathfinder logic makes a quantifiable difference to the quality of execution for US DMA flow.

## List of markets

<sup>1</sup> Routing via trading desk: orders are electronically executed via our Trading Execution desk where a registered Credit Suisse trader will manage the orders – these are fully automated and confirmations are also automatically received..

<sup>2</sup> Thailand/Taiwan: these markets do not allow DMA but Credit Suisse allows an expedited form of order working that routes an order to a dealing desk which is then instantaneously sent to the exchange..
